

Networkfleet Fact Sheet

About Verizon's Networkfleet, Inc.

Networkfleet, Inc. is a leading provider of wireless fleet management services that improve fleet operations by decreasing fuel use, optimizing vehicle utilization, decreasing maintenance costs with vehicle diagnostics, and improving driver management. Networkfleet's technology combines patented remote diagnostic monitoring with GPS-based Automatic Vehicle Location (AVL) systems. With access to more than 50 patents issued or pending, the company has received numerous awards for its technology. Founded in 1999 and headquartered in San Diego, CA, Networkfleet is owned by Verizon, a global leader in delivering broadband and other wireless and wireline communications services to consumer, business, government and wholesale customers.

Products

Networkfleet gives fleet managers secure, easy-to-use web access to real time information on virtually any aspect of their fleet operations like GPS fleet maps, dashboards, reports, and alerts. Networkfleet's 5000 Series of 24/7 fleet tracking hardware is designed to locate vehicles in real time and monitor specific vehicle data such as mileage, speed, fuel consumption and diagnostic trouble codes. The 5000 line includes the 5200 GPS tracking device and the 5500, which adds the capability of connecting directly to the vehicle's diagnostic port to monitor engine status continually. Both devices have a built-in accelerometer and multiport options.

Networkfleet's product line also contains Garmin Integration. Networkfleet CONNECT integrates Garmin navigation devices with our fleet website to help you better manage your vehicles. With CONNECT, you can assign jobs, dispatch drivers to specific destinations, provide turn-by-turn directions and communicate with drivers in real-time, all via the driver's in-cab Garmin device.

Through Networkfleet's web-based application, fleet managers can:

- View map of entire fleet or individual vehicles
- Communicate via real time or scheduled two way messaging
- View specific vehicle data such as current location, precise mileage, speed and idle time
- Create/assign jobs by address, landmark, lat/long & vehicle
- Receive mileage based scheduled maintenance via email
- Schedule reports to be delivered daily, weekly, or monthly
- Receive real time exception based alerts (like Diagnostic Trouble Codes) via email or text messaging
- Monitor fleet performance through comprehensive reporting suites, customizable by time and vehicle groups
- Get location updates and turn-by-turn driving directions
- Remotely monitor vehicle diagnostic data, fuel consumption, continuous emissions monitoring, and service maintenance records (5500 device only)
- Get instant access to entire fleet from a mobile phone

Services

Networkfleet offers:

- Free emergency roadside assistance and nationwide stolen vehicle recovery
- Third Party Data Integration with other vehicle management applications such as GIS, Fleet Management, and Dispatching/Scheduling software
